

DWA_04.3 Knowledge Check_DWA4

1. Select three rules from the Airbnb Style Guide that you find **useful** and explain why.

- Always include alt in image tags
 - If the file is missing from the program and the image doesn't show then the alt tag is a useful way to quickly identify which image is missing so that fixing the problem is easier
 - Use the file name as the component name
 - This makes it easier to find the file being used in the component
 - Always use camel case for prop names
 - What ever case is decided i just think it's good to have conventions for naming different types of elements
-

2. Select three rules from the Airbnb Style Guide that you find **confusing** and explain why.

- Wrap JSX tags in parentheses when they span more than one line. eslint: `react/jsx-wrap-multilines`
 - I don't see immediately how this is helpful and they already have their own arrow brackets which make them distinct from other lines of code
 - Use arrow functions to close over local variables.
 - Even if the function is being used for a local variable it is still useful to be able to call the function in other areas of code and it is not common that you would have a function that only gets used once.
 - It is also harder to read
 - Always self-close tags that have no children.
 - I don't see the functionality here, and it makes it harder too go back and edit later if a child needs to be added
-
