DWA_08 Discussion Questions

In this module you will continue with your "Book Connect" codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

_____

1. What parts of encapsulating your logic were easy?
Finding the parameters necessary for the function. And the factory function didn't end up having to be too different from what i originally had.

_____

2. What parts of encapsulating your logic were hard?
It was hard to make it smaller than my original function. A lot stayed the same which made it easy but it felt like I wasn't doing enough. Would appreciate some feedback and pointers for this one.

_____

3. Is abstracting the book preview a good or bad idea? Why?
I think it's a good idea. It creates more instances for the event listener with the new parameters. Also it is now a named function which shows its purpose and makes it better for readability.

_____
